GAS ABSTRACTS

VOLUME 16

1960

AFFILIATED WITH

ILLINOIS INSTITUTE OF TECHNOLOGY

Gas Abstracts is published and distributed monthly by the Institute of Gas Technology. The current technical literature is reviewed and material of potential interest to the Gas Industry is abstracted. These abstracts are classified by subject and arranged in the thirteen groupings presented below—

CONTENTS

1. **Management**—Gas industry progress, business problems, statistics, government regulation, safety, personnel, education.
2. **Energy Supply and Economics**—Resources, reserves, and competitive applications of the fossil fuels and other sources of energy, including nuclear and solar energy.
3. **Natural Gas and Petroleum Production**—Geology, exploration, drilling, well management, reservoir engineering.
4. **Gas Conditioning and LPG Recovery**—Condensate, dust, CO_2 and sulfur removal; dehydration, odorization, oil fogging, humidification; LPG recovery and refining.
5. **Natural Gas Transmission**—Pipelines, compressors, dispatching, flow regulation, communications, maintenance.
6. **Gas and LPG Storage**—Holders, pressure tanks, underground storage; liquefaction, refrigerated storage.
7. **Manufactured Gas and Chemical Processing**—Gasification of coal, oil; reformed gas; chemical treatment; byproducts; synthesis gas production and conversion; petrochemicals; catalysts, catalyst development.
8. **Gas Distribution**—City utility systems: design, operation, maintenance; weather influence on peak loads and supply; LPG-air mixtures.
9. **Gas Fuel Utilization and Appliances**—Domestic, commercial, industrial; burners; combustion research; air pollution.
10. **Equipment and Instrumentation**—Production and handling equipment, and maintenance; computers; controls; measurement.
11. **Materials of Construction, and Corrosion**—Metals, refractories, plastics; corrosion measurement, prevention.
12. **Analytical Methods and Tests**—Standard and research techniques for gas-making materials, products, processes; instrumental analysis.
13. **Basic Science**—Chemistry, physics and basic engineering related to gas technology; physical properties of gases: phase equilibria, thermodynamics, reaction kinetics, heat and mass transfer, fluid flow.
